

About Me

Ethan L. Moore

September 2021

1 Introduction

I am a computer science student currently attending Western Kentucky University. This is my portfolio website that contains all aspects of my academic and professional pursuits.

2 Languages

I am proficient in Java and Python. I have experience in Ruby, C++, Javascript, and Solidity. I also have experience in HTML, CSS, Markdown, and \LaTeX . I hope to learn Haskell and a Lisp dialect in the future.

3 Interests

I am heavily interested in blockchain and smart contract development. I hope to one day implement web3 into this website and allow users to sign in using their wallet. I am also interested in furthering my knowledge of programming languages and designing programs with their different attributes in mind. I enjoy shell scripting and automating mundane routines (Check out my ScriptAndConfigs github repo!).

4 Future Ambitions

My ambitions include keeping this website and my repositories up to date. Furthering my education to graduation. Specialize deeper into smart contracts, blockchain related technologies, and continue to learn more about general computer science concepts.
